Sending alerts with Telegram

Telegram API with Python

1. Automate the Data processing (e.g. gather web data from Web sites)

2. Send the result To telegram user

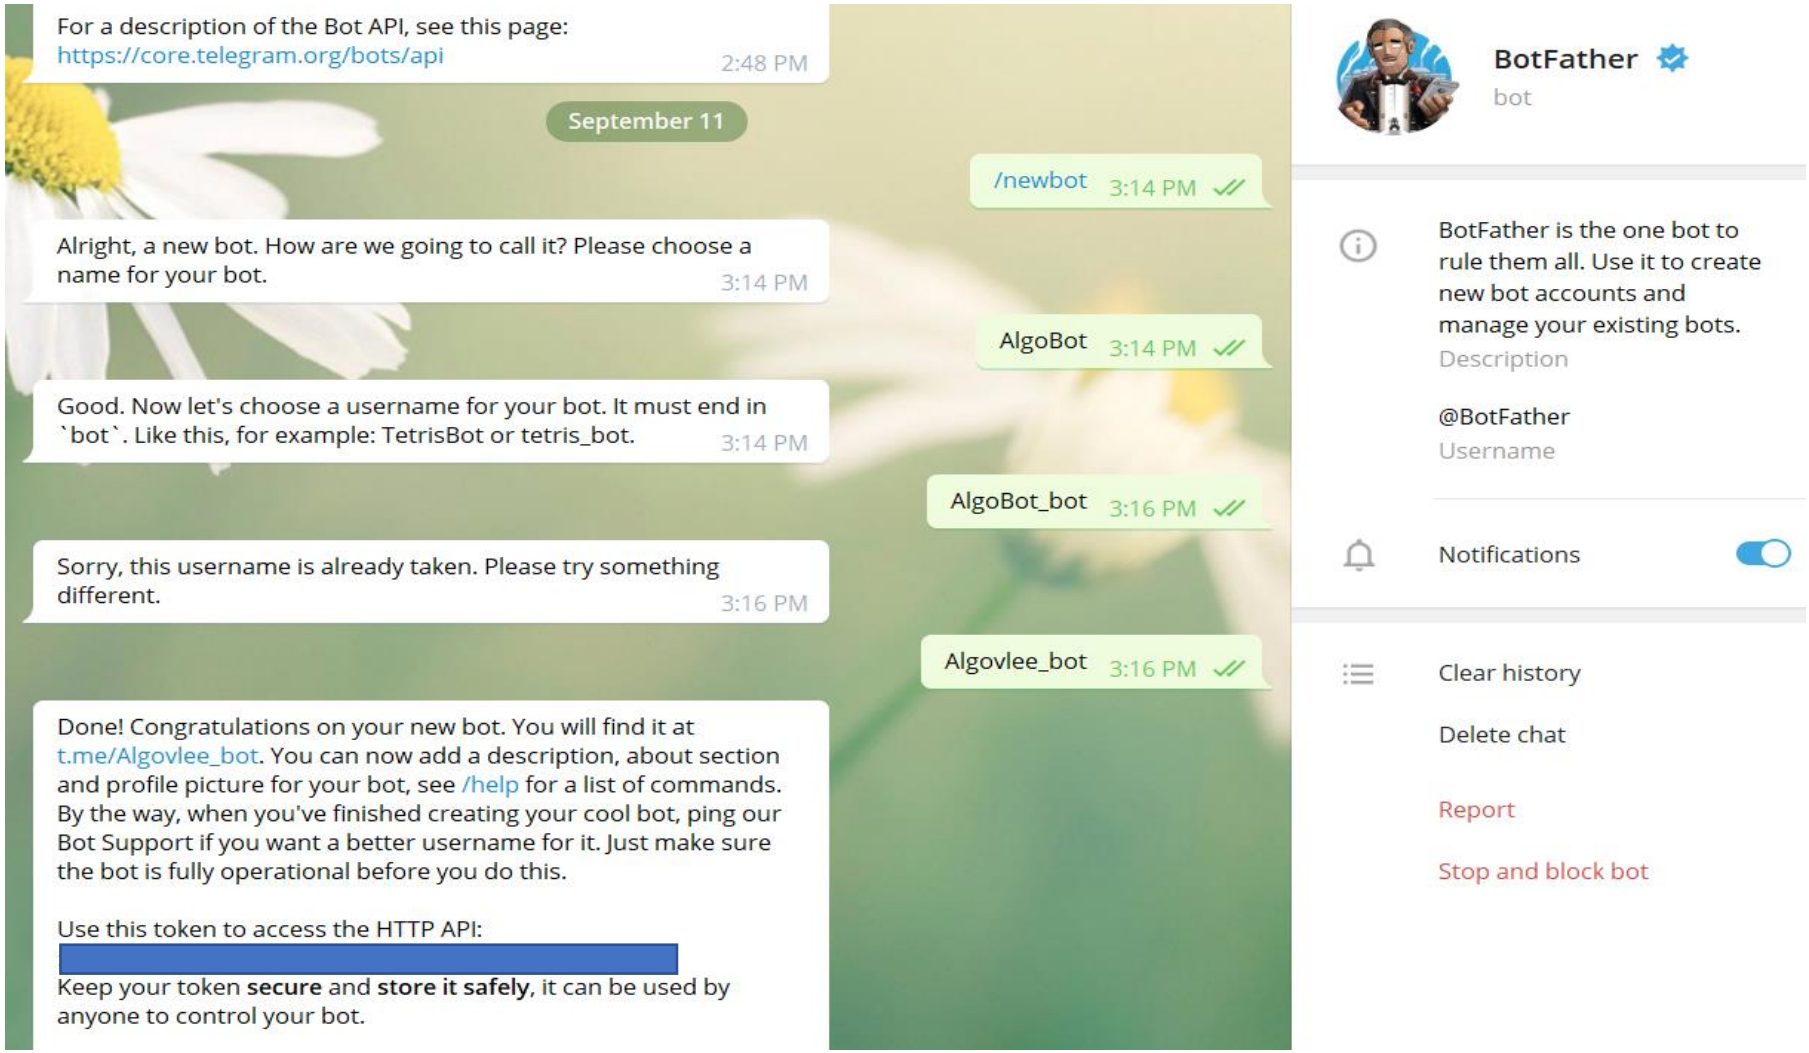

Step one

- Create Telegram account
- Login with your mobile phone
- Download Telegram desktop application

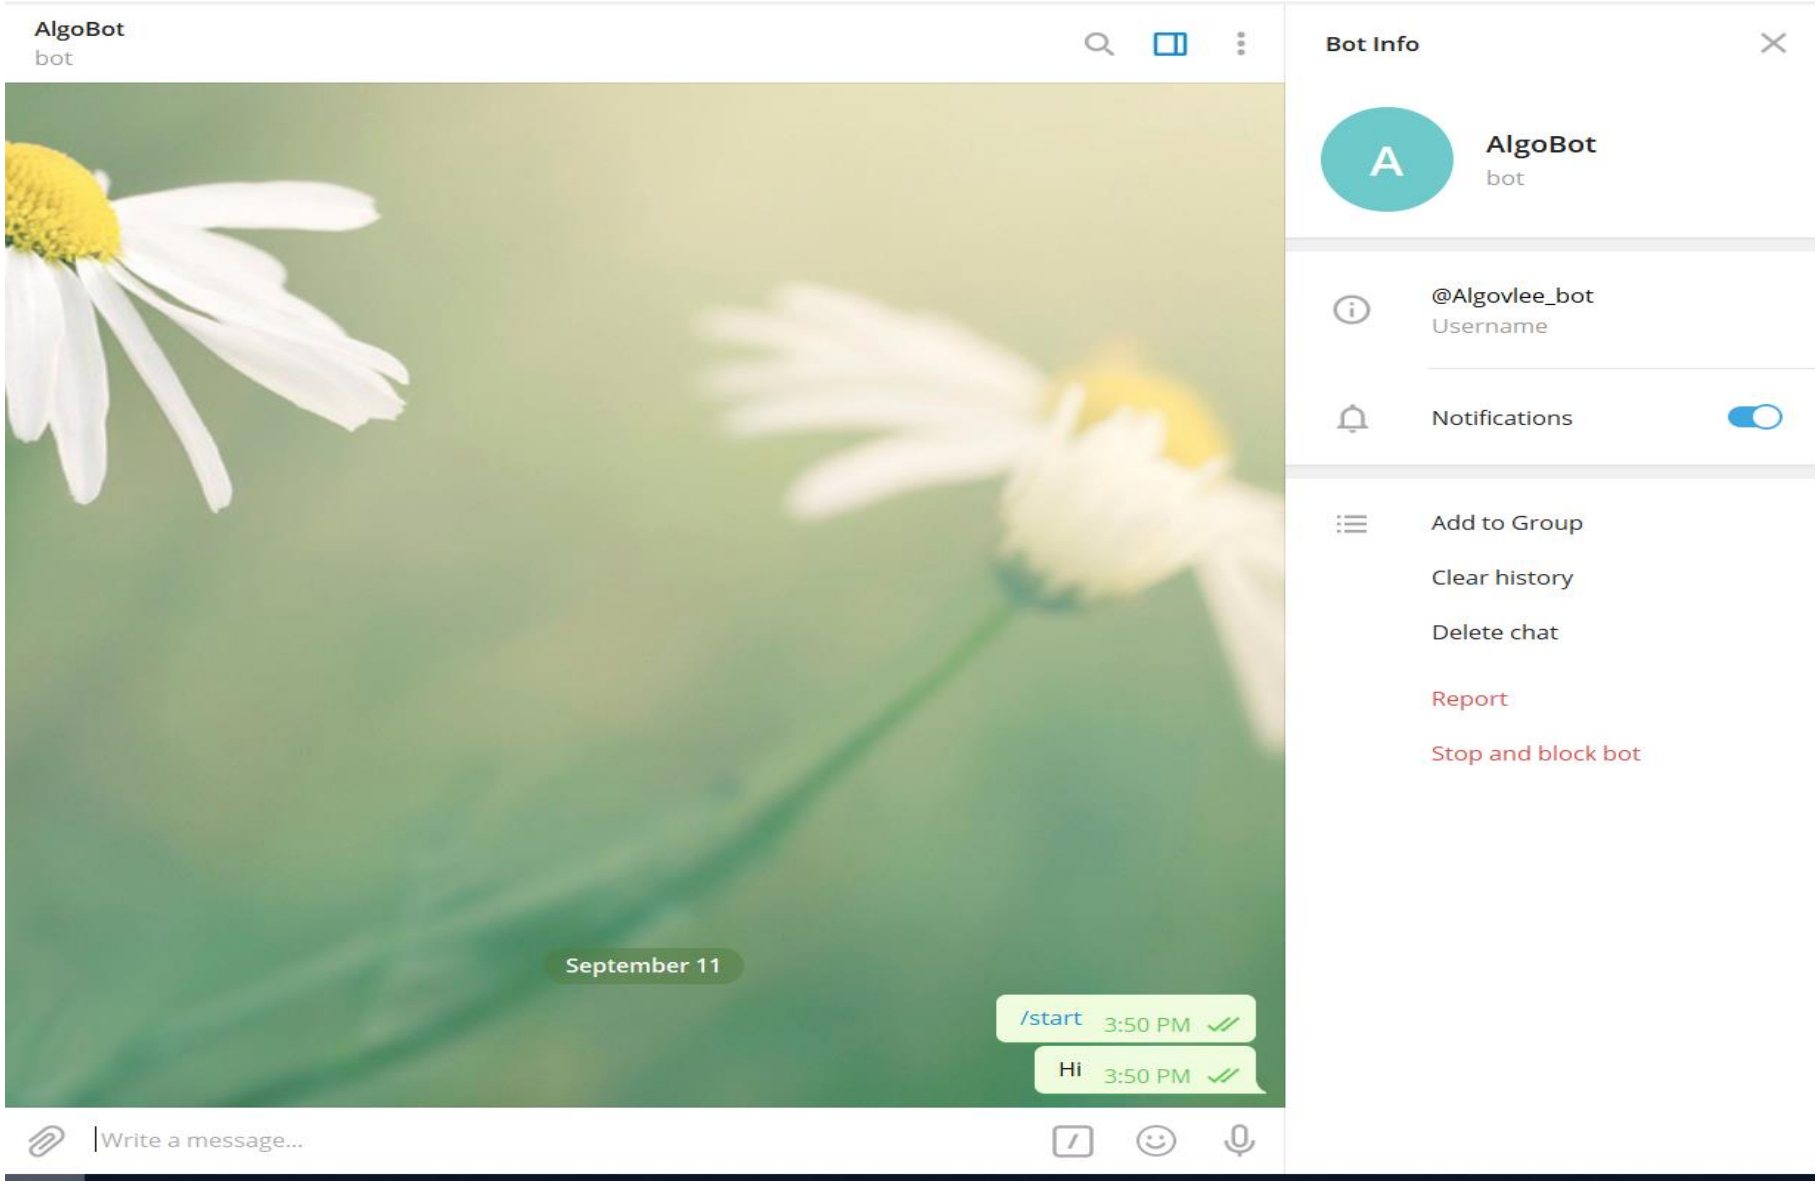

Step two

- To setup a bot in the Telegram:
- Open a chat with the **‘BotFather’** from within Telegram.
- Type in the command **/newbot**
- It will prompt you to enter a **bot name** and send you a access token.
- Open a new chat with your newly created bot.
- Click startbot
- Type something in to activate the chat.

Example

For a description of the Bot API, see this page:
https://core.telegram.org/bots/api
2:48 PM
September 11
/newbot 3:14 PM
Alright, a new bot. How are we going to call it? Please choose a name for your bot.
3:14 PM
AlgoBot 3:14 PM
Good. Now let's choose a username for your bot. It must end in `bot`. Like this, for example: TetrisBot or tetris_bot.
3:14 PM
AlgoBot_bot 3:16 PM
Sorry, this username is already taken. Please try something different.
3:16 PM
Algovlee_bot 3:16 PM
Done! Congratulations on your new bot. You will find it at t.me/Algovlee_bot. You can now add a description, about section and profile picture for your bot, see /help for a list of commands. By the way, when you've finished creating your cool bot, ping our Bot Support if you want a better username for it. Just make sure the bot is fully operational before you do this.
Use this token to access the HTTP API:
Keep your token secure and store it safely, it can be used by anyone to control your bot.
BotFather
bot
BotFather is the one bot to rule them all. Use it to create new bot accounts and manage your existing bots.
Description
@BotFather
Username
Notifications
Clear history
Delete chat
Report
Stop and block bot

Open a new chat with your newly created bot

Step three

- Go to the following URL – **https://api.telegram.org/botxxxxxxxxxxxxxxxxx/getUpdates** – replacing the XXX with your access token. Here you should see a JSON structure. Note down the id (not to be confused with update_id or message_id).
- We would like to get the chat ID from here

Step three -screenshot

Your chat ID

- {"ok":true,"result":[{"update_id":XXXXXX,
- "message":{"message_id":21,"from":{"id":**XXXXX**,"is_bot":false,"first_name":"Victor Lee","username":"vickslee","language_code":"en"},"chat":{"id":XXXX,"first_name":"Victor…….

Step four

- Go to Jupyter python
- Install package
- ! pip install python-telegram-bot
- Define your token and chat ID
- Done ☺

Sample code for illustrating the concept

- Please refer to separate python code for more details
