

Setup of Web Tunneling and Web Hooking

Webhook

Public URL
n8n workflow
http request
(POST/GET)
Server/IM bot etc
(e.g. payment gateway)
Webhook node

Setup webhooking with ngrok

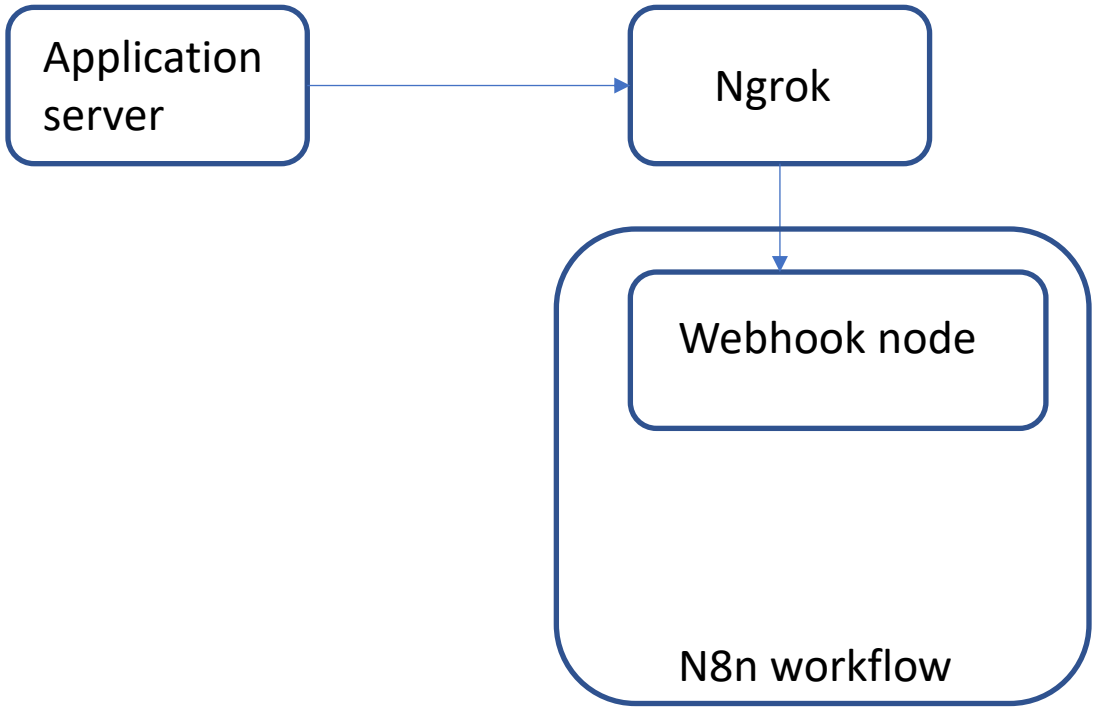

- Register/login ngrok
- Download ngrok client into your PC
- Login with your token
- Setup port forwarding with the following command in command prompt:

ngrok http http://localhost:5678

Setup Webhooking with Ngrok and Python

Domain name

URL: https://abcdexxxx

Token (get it from Ngrok web site)

1 Configure the token for ngrok session

```
D:\ngrok>

D:\ngrok>ngrok config add-authtoken
```

2 Setup remote tunnel session under local host

```
D:\ngrok>

D:\ngrok>ngrok http http://localhost:5000
```

Port number used for forwarding in the tunnel

3 Copy the URL link assigned by Ngrok

```
Command Prompt - ngrok  http http://localhost:5000
ngrok

   ngrok? We're hiring https://ngrok.com/careers

Session Status                online
Account                       vickslee@gmail.com (Plan: Free)
Update                        update available (version 3.18.4, Ctrl-U to update)
Version                       3.2.2
Region                        Asia Pacific (ap)
Latency                       54ms
Web Interface                 http://127.0.0.1:4040
Forwarding                    https                                -> http://localhost:5000

Connections                   ttl     opn     rt1     rt5     p50     p90
                              2       0       0.00    0.00    0.33    0.33

HTTP Requests
-------------

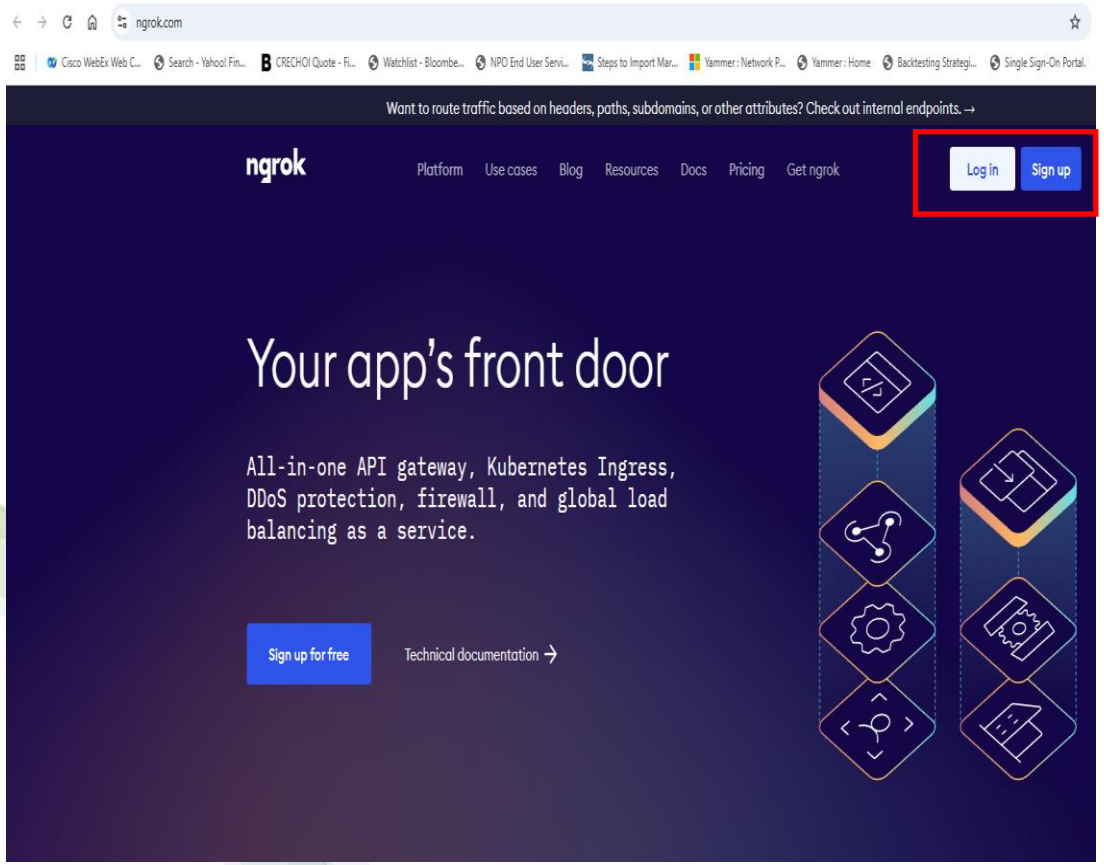

POST /webhook                 200 OK
POST /webhook                 200 OK
```

Web Url assigned by Ngrok

Remark: adjust the port number for n8n (from 5000 to 5678)

Building secure tunnel with Ngrok

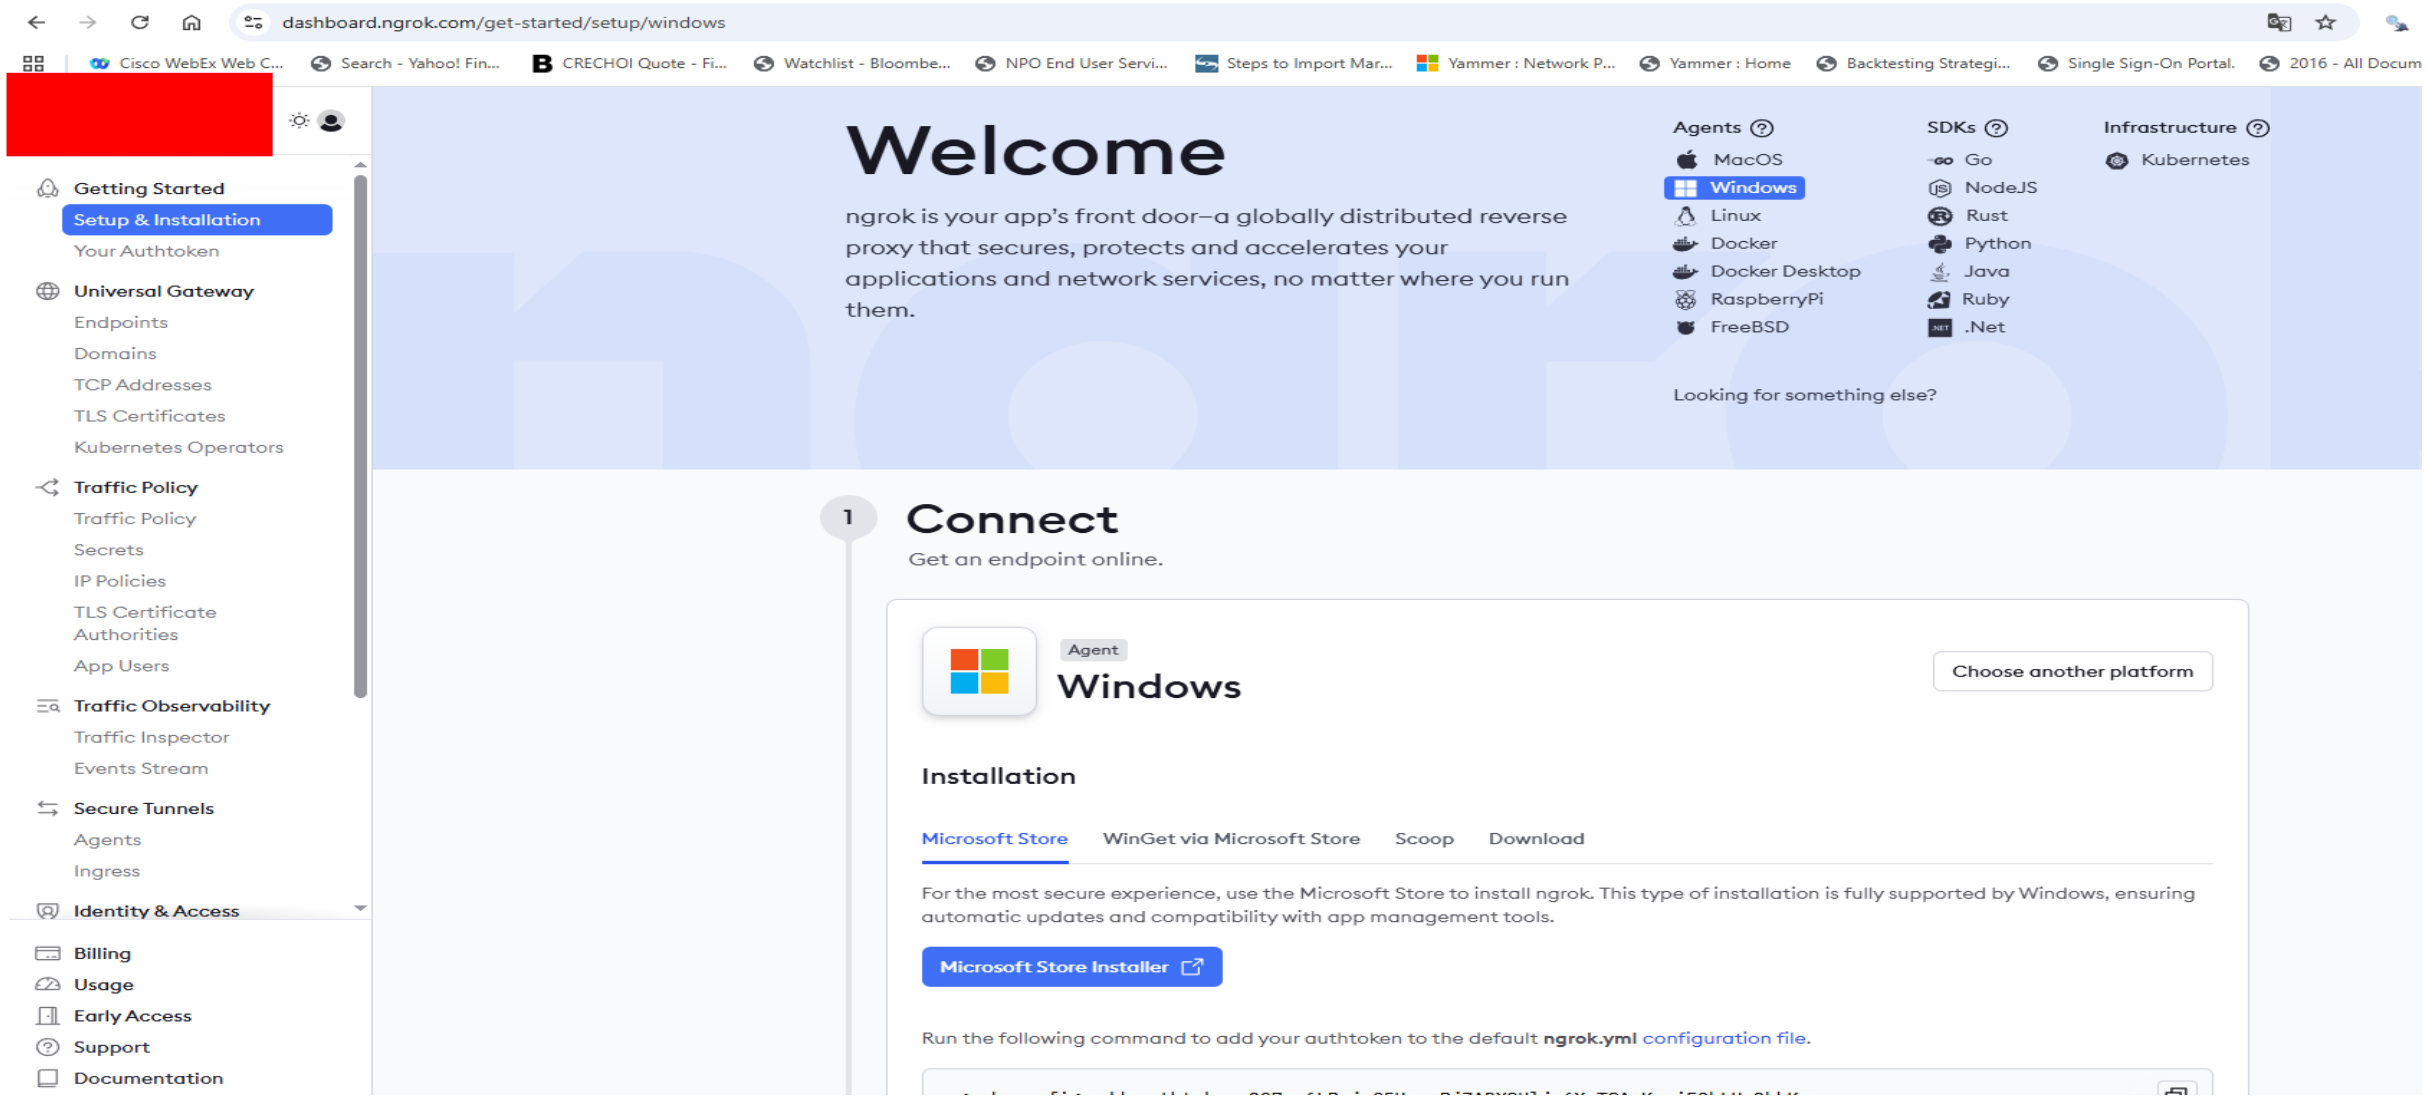

Login or Sign Up

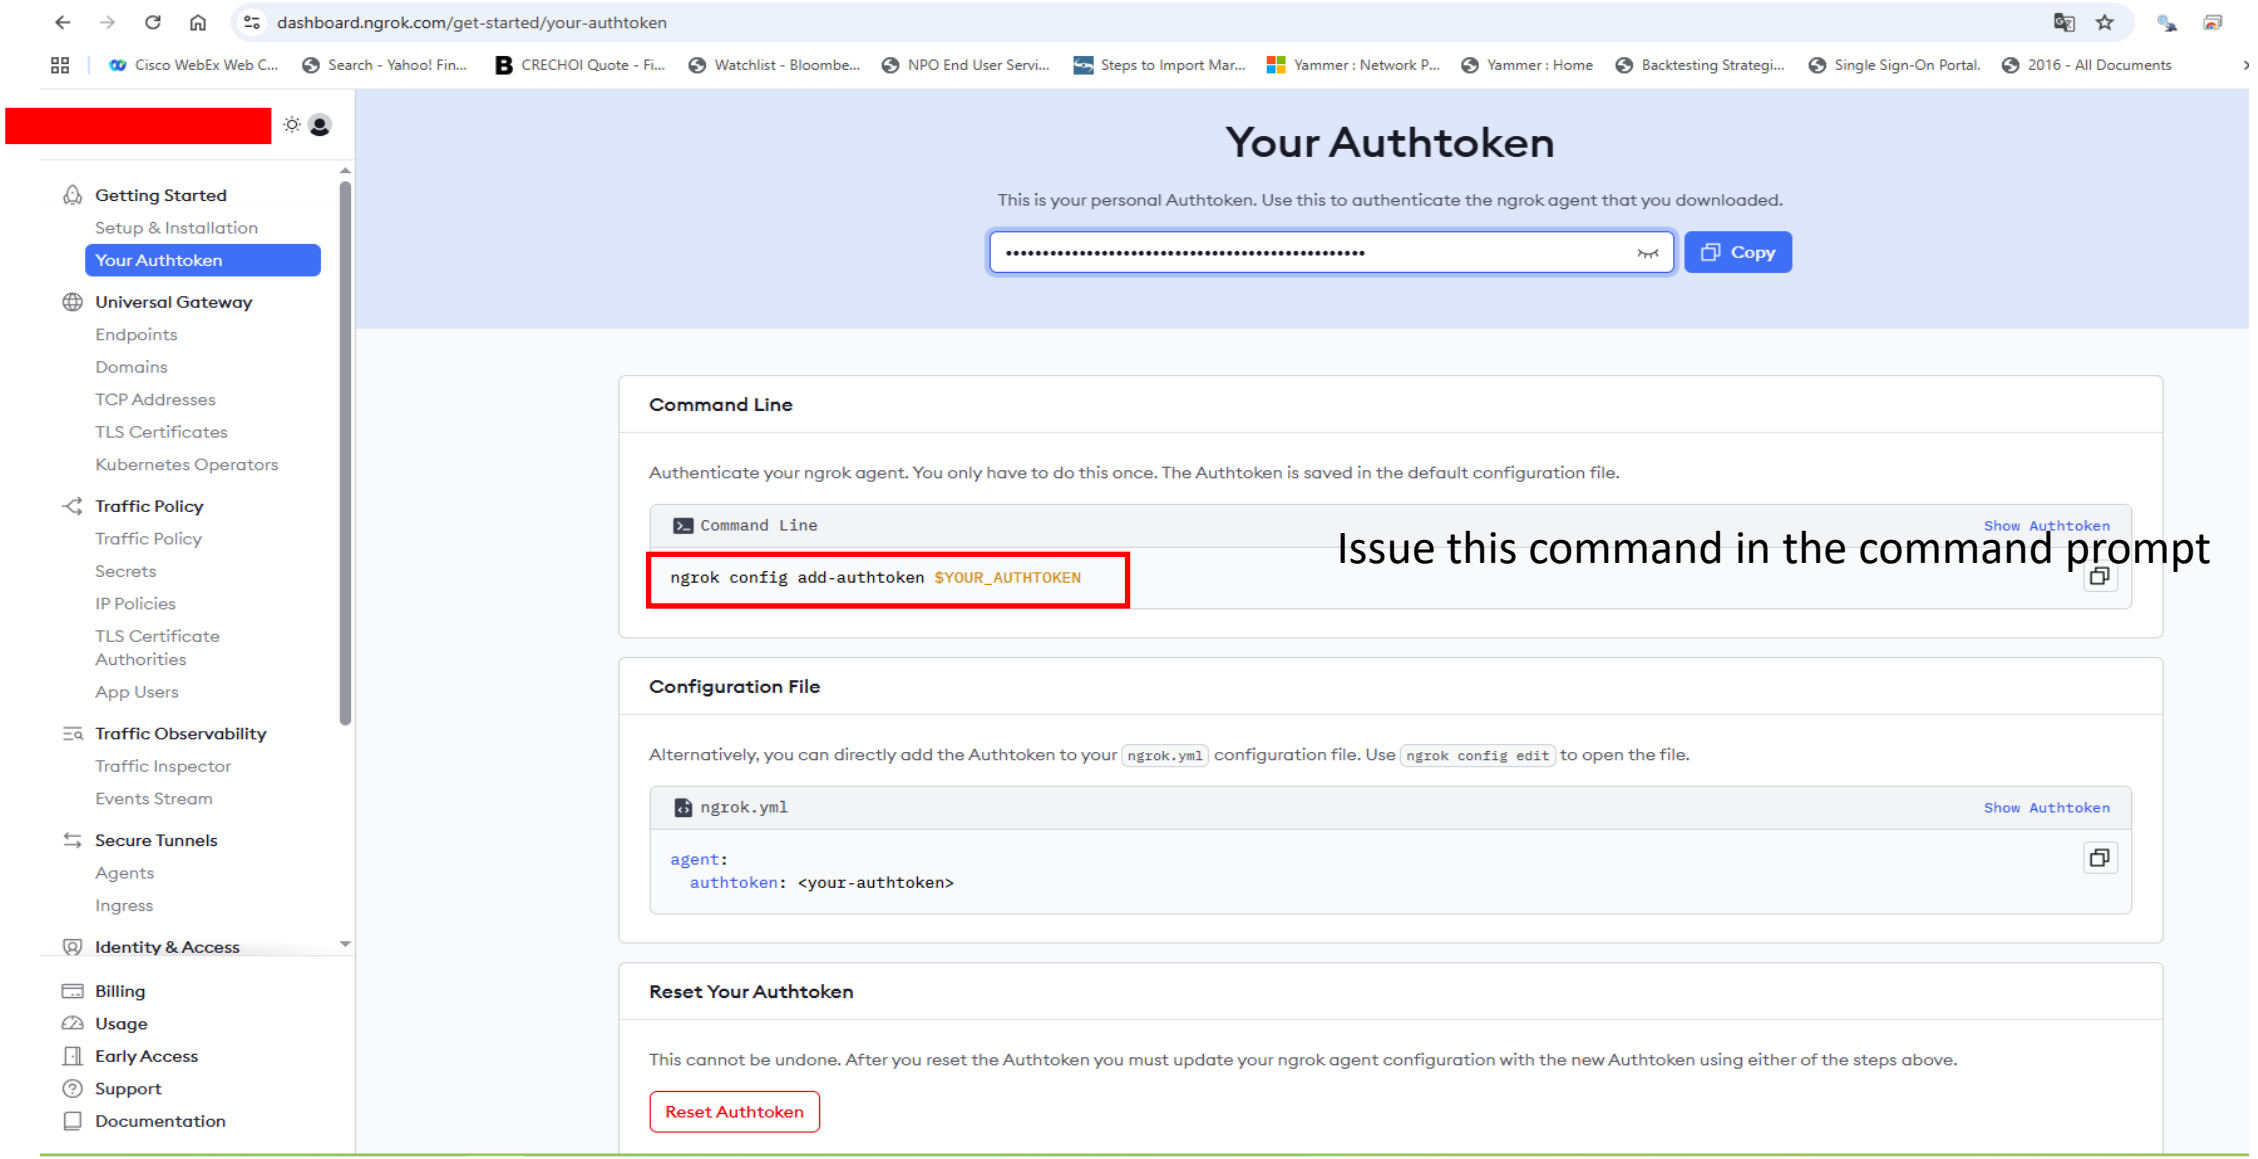

Ngrok Overview:

- **Tool Purpose**: Ngrok creates a secure tunnel from the public internet to a local server on your private network.
- **Key Benefits and Functions:**
- **Tunneling**:
  - Exposes local web servers to the internet through secure tunnels.
  - Allows sharing of a web URL globally that directs to your local application.
- **Secure Connections**:
  - Encrypts all traffic through ngrok tunnels.
  - Protects data from eavesdropping during transmission.
- **Simplifies Configuration**:
  - Removes the need for a public IP address.
  - Eliminates the requirement for port forwarding on routers.

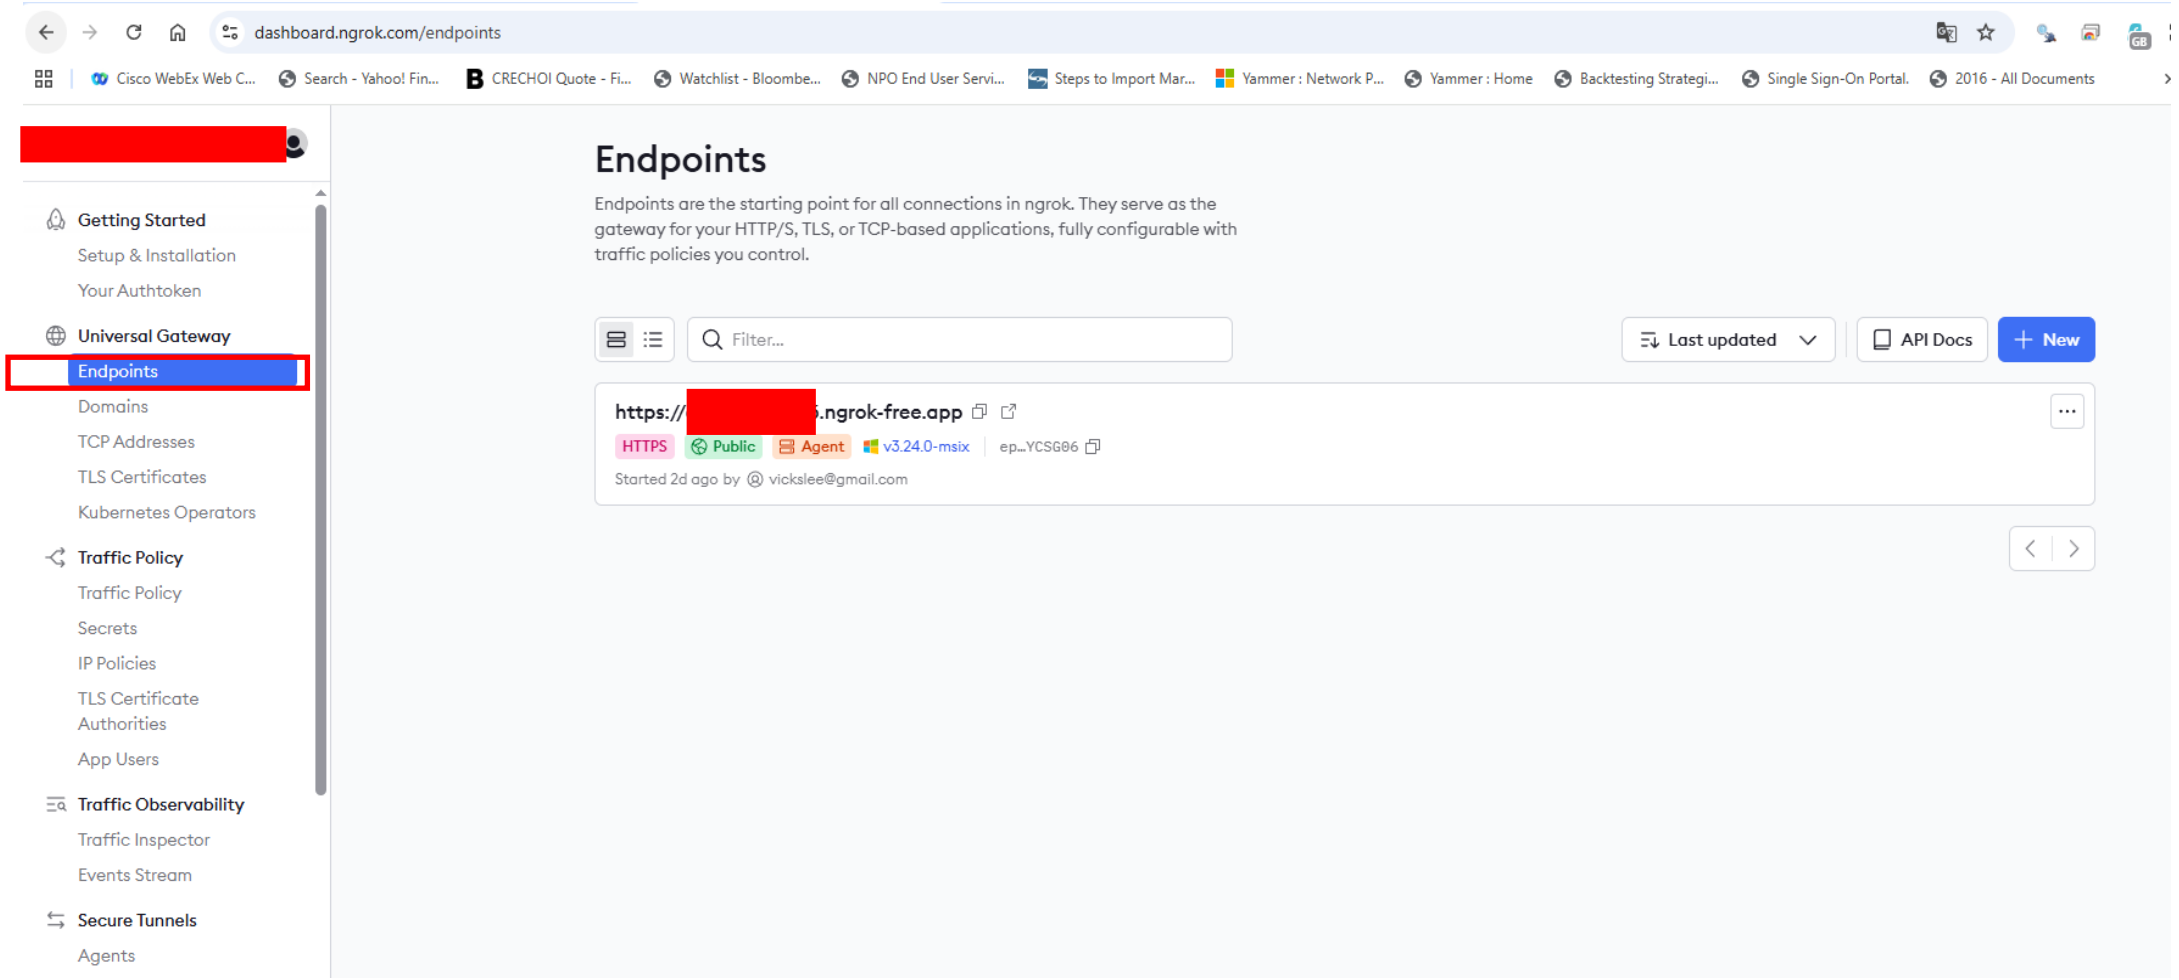

Installation of ngrok in local machine

Configure the token in the local machine

Check the endpoint in ngrok

Setup Webhook in local server
n8n setup

- Use the following command **under power shell** in windows and setup the webhook mapping in your local server

$env:WEBHOOK_URL = "https://YOUR-NGROK-SUBDOMAIN.ngrok.io/"

- Use the following command if you want to setup a permanent mapping

setx WEBHOOK_URL " https://YOUR-NGROK-SUBDOMAIN.ngrok.io/"

Use the following command if you want to check the current setting:

echo $env:WEBHOOK_URL

Setup Webhook in local server
Checking the webhook details in Telegram

- Use the following link to check the webhook details in telegram

https://api.telegram.org/bot<YOUR_BOT_TOKEN>/getWebhookInfo

{"ok":true,"result":{"url":"https://[redacted]/webhook","has_custom_certificate":false,'

AI Chatbot

Sample Workflow with n8n
